The purpose of a stock market is to facilitate the exchange of securities between buyers and sellers, reducing the risks of investing. Just imagine how difficult it would be to sell shares if you had to call around the neighbourhood trying to find a buyer. Really, a stock market is nothing more than a super-sophisticated farmers market linking buyers and sellers. Before we go on, we should distinguish between the primary market and the secondary market. The primary market is where securities are created (by means of an IPO) while, in the secondary market, investors trade previously-issued securities without the involvement of the issuing-companies. The secondary market is what people are referring to when they talk about the stock market. It is important to understand that the trading of a company's stock does not directly involve that company.
